Instructions: Implement the codes below and answer the questions in the student task section.

Filename: index.php

```php
<?php

session_start();
require 'header.php';

if ($_SERVER['REQUEST_METHOD'] == 'POST') {

    $_SESSION['name'] = $_POST['name'];
    $_SESSION['course'] = $_POST['course'];
    $_SESSION['student_id'] = $_POST['student_id'];

    setcookie("user_name", $_POST['name'], time() + (3600), "/");

    echo "<p style='color:green;'>Data saved successfully!</p>";
}
?>

<form method="POST">
    Student ID: <input type="text" name="student_id" required><br>
    Name: <input type="text" name="name" required><br>
    Course: <input type="text" name="course" required><br>
    <button type="submit">Save Info</button>
</form>
```

Filename: header.php

```php
<?php

echo "<nav>
        <a href='index.php'>Home</a> |
        <a href='dashboard.php'>Dashboard</a> |
        <a href='preferences.php'>Preferences</a>
      </nav><hr>";
?>
```

Filename: preferences.php

```php
<?php
include 'header.php';

if (isset($_COOKIE['user_name'])) {
    echo "<h2>Cookie Data</h2>";
    echo "Welcome back, " . $_COOKIE['user_name'] .
        "! Your name was remembered by a cookie.";
} else {
    echo "No cookie found.";
}
?>
```

Filename: dashboard.php

```php
<?php
session_start();
include 'header.php';

if (isset($_SESSION['name'])) {
    echo "<h2>Welcome to your Dashboard</h2>";
    echo "Name: " . $_SESSION['name'] . "<br>";
    echo "Course: " . $_SESSION['course'] . "<br>";
    echo "ID Number: " . $_SESSION['student_id'] . "<br>";
} else {
    echo "No session found. Please go back to Home.";
}
?>
```

Student Task:

1. Run the implemented code and take a screenshot of each of the output pages – use your personal information for the input data.
2. Delete header.php and run index.php. Notice the fatal error. Then, rename it back and run dashboard.php using include. Take a screenshot of both outputs. What is the difference in behavior?

3. Fill out the form in index.php. Close your browser completely. Reopen it and go directly to preferences.php. Does the name still appear? Now check dashboard.php. Is the session data still there?
4. Modify preferences.php to allow the user to "Logout" by using session_destroy() and setting the Cookie expiration to a past time (e.g., time() - 3600).
